SOUTHEAST LANDMARK LTD.

Sales CRM System — Revised Architecture v2.0

Formal Architecture Review Response | July 2026

Prepared by: Business Architecture — SLLA

APPROVAL TARGET	Full development approval — subject to 12 formal conditions listed in Section F

Section A — Corrected Sales Pipeline (15 Stages)

Every lead follows a defined pipeline from New to Sold. Each stage change is recorded as a history entry — no previous stage is ever overwritten. Pipeline stages, call outcomes, appointment statuses, and manager assesSales Managerents are now stored as completely separate fields.

#	Pipeline Stage	Description
01	**NEW**	Lead received from Meta form submission or imported from existing lead bank
02	**ASSIGNED**	Routed to specific executive — SLA response clock starts immediately
03	**FIRST CONTACT PENDING**	Waiting for executive to make first call — overdue if SLA exceeded
04	**CONTACT ATTEMPTED**	Executive has dialled — call not yet connected
05	**CONNECTED**	Live conversation has taken place with the prospect
06	**QUALIFIED**	Budget, intent, purchase timeline, and decision-maker confirmed
07	**DISQUALIFIED**	Does not meet minimum criteria — routed to exit stage with reason
08	**APPOINTMENT SCHEDULED**	Site visit or meeting date has been set and logged in calendar
09	**APPOINTMENT CONFIRMED**	Customer has confirmed they will attend
10	**VISIT / MEETING COMPLETED**	Appointment concluded — post-visit debrief is now required
11	**PROPOSAL PRESENTED**	Payment plan or project offer formally shared with prospect
12	**NEGOTIATION**	Price, payment terms, or conditions under active negotiation
13	**RESERVATION RECEIVED**	Booking payment collected — receipt and approving officer recorded
14	**DOCUMENTATION IN PROCESS**	Agreement, deed, or sale file preparation underway
15	**SOLD**	Commercial transaction fully completed and independently verified

Alternative Exit Stages

- NURTURE — Lead not ready now; assigned to reactivation campaign with scheduled future follow-up date
- CLOSED LOST — Confirmed non-buyer; reason code, competitor name, and authorising officer required
- INVALID — Wrong number, unreachable contact, or spam submission
- BOUGHT ELSEWHERE — Competitor confirmed by customer
- UNREACHABLE — Multiple attempts over extended period with no response

Section B — The 12-Module Architecture

Restructured from 9 to 12 modules. Lead data, activity tracking, pipeline management, appointments, commercial records, and analytics are now distinct and independently maintainable modules.

Module	Function
M-01	Lead Source & Campaign Integration
M-02	Contact Identity, Deduplication & Inquiry History
M-03	Lead Assignment, Capacity Management & SLA
M-04	Executive Lead Workspace
M-05	Interaction, Call, Note & Recording Management
M-06	Qualification, Pipeline Stage & Mandatory Next Action
M-07	Appointment, Site Visit & Meeting Management
M-08	Objection Intelligence, Nurture & Reactivation
M-09	Manager Review, Intervention & Coaching
M-10	Reservation, Sale, Plot & Collection Records
M-11	Executive, Funnel, Campaign & Revenue Analytics
M-12	Security, Administration, Audit & Notifications

M-01 Lead Source & Campaign Integration

Receives leads from Meta (Facebook) ads in real time. Captures not just personal details but also which campaign, ad, and form the lead came from — so marketing knows exactly which ads generate visits and sales.

- Facebook Lead Ads webhook — automatic real-time capture with no manual import
- Campaign ID, Ad Set ID, Ad ID, Form ID, and UTM fields captured per inquiry
- Phone number normalised to standard format before any check (017X / 88017X / +88017X → standard)
- Contact created or matched — existing contact records are never deleted
- New Inquiry record created for every unique form submission
- Retry logic and administrator alert if webhook fails repeatedly

M-02 Contact Identity, Deduplication & Inquiry History

Every person is stored once as a Contact. Every enquiry is saved as a new Inquiry under that Contact. Full history is preserved even when the same person submits multiple times across different campaigns or months.

- One Contact → Multiple Inquiries model (replaces the overwriting single-record approach)
- Phone normalised before duplicate check to catch all format variations
- Each Inquiry linked to its campaign, ad, form, and original submission date
- Original objection tags importable from existing lead bank with history intact
- Excel or CSV bulk import with automated deduplication
- No inquiry history is ever overwritten or permanently deleted

M-03 Lead Assignment, Capacity Management & SLA

Assigns leads to executives using Sales Managerart routing — not time slots alone. Considers current load, availability, and SLA compliance. If an executive fails to act within the required time window, the system escalates automatically.

- Time slot remains one configurable input per executive (set by SALES MANAGER in Settings)
- Capacity-aware routing: no executive receives disproportionate lead volume
- Round-robin sequence as tie-breaker between equally available executives
- SLA response clock starts immediately on every assignment
- SLA flow: 0 min Notified → 10 min Reminder → 20 min SALES MANAGER Alerted → 30-60 min Eligible for Reassignment
- SALES MANAGER can manually override and reassign any lead at any time

M-04 Executive Lead Workspace

The main working screen for each sales executive. Shows assigned leads with full context — campaign source, lead age, last activity, next action due, and priority. Executives see only their own assigned leads.

- Lead card shows: Name, Phone, Job Title, Profession, Campaign Source, Lead Age
- Next action type and due date displayed on every card
- Priority level visible on card (assigned by SALES MANAGER)
- Call Now button — opens native phone dialler
- Recording upload button per lead (.mp3 / .m4a / .wav)
- Overdue indicator displayed in red when next action deadline has passed

M-05 Interaction, Call, Note & Recording Management

Tracks every action on a lead with full timestamps. Executives must complete a structured call log form after every call. This makes all KPI data verifiable and prevents inflated activity reports.

- After clicking Call → structured call log form is required before the lead can be moved
- Log fields: Connected / Not Connected, Duration Band, Outcome, Notes, Next Action, Next Action Date
- All recordings stored securely in cloud storage (S3 / Firebase) with access logging
- SALES MANAGER can listen to recordings and assign a coaching score per call
- Complete chronological activity timeline visible per lead
- Recording download restricted to SALES MANAGER, GM, and CEO only

M-06 Qualification, Pipeline Stage & Mandatory Next Action

Every lead carries a defined pipeline stage, a lead temperature, and a mandatory next action with a deadline. No lead can remain open without a future action assigned. This eliminates lead leakage from inactivity.

- Full 15-stage pipeline from New to Sold (see Section A)
- Alternative exits: Nurture / Closed Lost / Invalid / Bought Elsewhere / Unreachable
- Every stage change creates a history entry — previous stages are never overwritten
- Lead temperature: Cold / Warm / Hot / Very Hot
- Mandatory next action — type, owner, and deadline required on every open lead
- Overdue next actions highlighted in red on SALES MANAGER dashboard and flagged in daily digest

M-07 Appointment, Site Visit & Meeting Management

Manages the full lifecycle of appointments from scheduling through to outcome. Scheduling a visit and the customer attending are completely separate events. The post-visit debrief only unlocks when the appointment is marked COMPLETED.

- Appointment statuses: Scheduled → Confirmation Pending → Confirmed → Completed
- Alternative outcomes: No-Show / Cancelled by Customer / Cancelled by Company / Rescheduled
- Post-visit debrief form only unlocks when appointment_status = COMPLETED
- Customer notification sent: confirmation message, map/location link, reschedule option
- Executive reminders at 24 hours before and 1 hour before each appointment
- Rescheduling history logged with reason code and new confirmed date
- SALES MANAGER sees consolidated team calendar showing all executives in one view

M-08 Objection Intelligence, Nurture & Reactivation

Records detailed objections after completed visits to build data-driven insight into why customers do not convert. Also manages the reactivation of existing leads who were not ready before but may be ready now following project developments.

- Objection codes: Development visibility, Shah Ali Bridge doubt, Distance, Price, Payment terms, Trust/documentation, Family approval, Timing, Cash flow, Competitor, No response post-visit
- Objection intensity recordable per code: Low / Medium / High
- Principal objection must be identified and logged in the post-visit debrief
- Executive response to each objection recorded for coaching review by SALES MANAGER
- Reactivation campaigns: Bridge progress update, new development phase, revised payment plan, site photos
- Existing lead bank importable with original objection tags and last-contact date

M-09 Manager Review, Intervention & Coaching

Gives the Sales Manager tools to assess leads strategically, coach executives, and intervene when a high-value opportunity needs personal attention. Operational labels are visible to executives; internal management assesSales Managerents remain private.

- Manager pipeline labels: Low Priority / Nurture / Qualified / High Intent / Negotiation / Intervention Required / Reserved / Sold / Closed Lost
- Executive sees: Pipeline stage, Priority level, Required next action, Escalation instruction
- Executive does NOT see: Coaching score, Internal manager comments, Risk assesSales Managerent
- SALES MANAGER listens to call recordings and assigns coaching scores per call
- Coaching actions tracked through to formal completion
- Side-by-side executive performance comparison view for SALES MANAGER, GM, and CEO

M-10 Reservation, Sale, Plot & Collection Records

Commercial completion is only confirmed when documentation exists. Reserved and Sold labels are only unlocked after payment, receipt number, and approving officer are formally recorded. This prevents premature or false declarations.

- Required booking fields: Project, Plot/Product, Customer, Booking Amount, Payment Method, Receipt No., Payment Date, Approving Officer
- Total sale value and instalment schedule tracked per deal
- Outstanding balance updated per collection event
- Cancellation and refund status recordable with documentation upload
- SALES MANAGER, GM, CEO have full access — executives see only their own confirmed deals

M-11 Executive, Funnel, Campaign & Revenue Analytics

Provides management with real performance data — conversion at every funnel stage, per executive, per campaign, and per time period. The CEO dashboard prioritises revenue and conversion metrics, not call activity volume.

- 20 KPIs covering funnel conversion, SLA compliance, revenue, and campaign attribution
- All executives visible side-by-side with date range filter
- Campaign attribution: which ad → which appointment → which sale
- Lead aging and leakage heatmap: 1 / 3 / 7 / 14 / 30 days untouched
- Revenue per 100 leads broken down by campaign source
- Cost per completed site visit and cost per customer acquired
- Reactivation conversion reporting — old leads that became sales

M-12 Security, Administration, Audit & Notifications

Governs who can access what, protects customer data, and manages all notifications with Sales Managerart routing — not blanket SALES MANAGERS + email + push for every event. Handles user management, system backups, and incident response.

- Secure login with MFA mandatory for SALES MANAGER, GM, and CEO
- Role-based access: Executive / SALES MANAGER / GM / CEO / System Admin (separate from developer)
- Field-level permissions on sensitive data, manager labels, and recordings
- Encryption in transit (HTTPS/TLS) and encryption at rest for all stored data
- Full audit log: every data change with user ID, timestamp, and previous value
- Sales Managerart notification routing: CRM Push first → SALES MANAGERS only if unacknowledged → SALES MANAGER alert if unresponded
- Manager daily digest: uncontacted leads, SLA breaches, overdue follow-ups, tomorrow's appointments
- Automated daily backup with tested monthly restoration
- Immediate user deactivation process on employee departure

Section C — Critical Design Fixes Applied

Fix 1 — Separate Lead Fields (No More Mixed Dispositions)

Previously, call outcomes, appointment types, pipeline stages, and commercial milestones were all stored in one status field — each update overwrote the last. Each lead now carries fully separate, dedicated fields:

Lead Field	What It Captures
Pipeline Stage	Where the lead currently sits in the sales journey
Last Activity Type	Phone call / Site visit / Meeting / Note
Last Activity Outcome	Connected / Not Connected / Completed / No-Show
Next Action	Required next step — type, owner, and deadline
Appointment Status	Scheduled / Confirmed / Completed / No-Show / Rescheduled
Lead Temperature	Cold / Warm / Hot / Very Hot
Manager AssesSales Managerent	Qualification, intervention flag, coaching note (private)
Final Result	Reserved / Sold / Closed Lost / Nurture

Fix 2 — Contact / Inquiry / Opportunity Model

Previously, a duplicate phone number caused the second submission to be silently rejected. This was commercially dangerous — the same person may return after construction progress, a revised payment plan, or a change in financial readiness. The new model:

- CONTACT — One record per unique person, matched by normalised phone number
- INQUIRY — One record per form submission or engagement; never deleted
- OPPORTUNITY — A qualified commercial possibility linked to project, plot, budget, and timeline

Result: One Contact → Multiple Inquiries → One or More Opportunities. Full campaign and objection history is always preserved, enabling accurate reactivation targeting.

Fix 3 — Reliable Call Tracking

The phone dialler button can open the dialler but cannot confirm a call happened, its duration, or its outcome. A structured call log form now appears after every call attempt and must be completed before the executive can continue:

- Connected or Not Connected
- Duration band: Under 1 min / 1–3 min / 3–10 min / 10 min+
- Outcome summary and conversation notes
- Next action type and deadline date

Call Attempt and Contact Rate KPIs are now fully verifiable — not self-declared through the dialler button.

Fix 4 — Site Visit Lifecycle Correction

Previously, the disposition code SV (Site Visit Scheduled) unlocked the post-visit debrief. A scheduled visit is not a completed visit. The post-visit debrief form now only unlocks when appointment_status = COMPLETED:

CORRECT FLOW	Scheduled → Customer Notified → Confirmation Pending → Confirmed → COMPLETED → Post-Visit Debrief Unlocks → Objections Recorded → Next Action Set

Fix 5 — Manager Pipeline Labels Corrected

The label BRAIN (Brain Purchase — Actively Considering) has been removed. It was ambiguous and would not be interpreted consistently across executives, developers, or management. Revised labels are:

- LOW PRIORITY — Lead in passive holding state
- NURTURE — Active nurturing with assigned campaign
- QUALIFIED — Budget, intent, and timeline confirmed
- HIGH INTENT — Strong purchase signal confirmed — priority follow-up
- NEGOTIATION — Price, payment, or terms under active discussion
- INTERVENTION REQUIRED — SALES MANAGER personal involvement needed immediately
- RESERVED — Booking payment received, documentation in process
- SOLD — Sale commercially verified and independently confirmed
- CLOSED LOST — Definitively lost, documented with reason and competitor

Section D — Revised KPI Framework (20 Metrics)

The previous 7 KPIs measured activity volume (calls made, leads assigned). The revised 20-KPI framework measures what management actually needs: conversion efficiency at every stage, revenue production, and SLA compliance. The CEO dashboard leads with funnel performance and revenue — not call counts.

KPI Name	Definition / Formula
Speed-to-Lead	Median minutes from assignment to first call attempt
SLA Compliance %	Leads contacted within SLA window ÷ total assigned leads
Contact Rate	Connected conversations ÷ total call attempts
Qualification Rate	Qualified leads ÷ connected leads
Appointment Booking Rate	Appointments scheduled ÷ qualified leads
Confirmation Rate	Confirmed appointments ÷ scheduled appointments
Show Rate	Completed visits or meetings ÷ confirmed appointments
Visit-to-Negotiation Rate	Negotiations opened ÷ completed visits
Visit-to-Reservation Rate	Reservations received ÷ completed visits
Reservation-to-Sale Rate	Sales verified ÷ total reservations received
Follow-Up Compliance	Follow-ups completed on time ÷ follow-ups due in period
Lead Aging Heatmap	Open leads grouped by age: 1 / 3 / 7 / 14 / 30 days untouched
Reactivation Rate	Old leads moved to Qualified ÷ total reactivation attempts
Closed-Lost Rate	Lost leads ÷ qualified leads (with mandatory reason codes)
Average Sales Cycle (Days)	Mean days from inquiry creation to verified sale
Revenue per 100 Leads	Total confirmed sale value ÷ total leads × 100
Collection Rate	Amount collected ÷ amount contractually due per period
Source Conversion Rate	Sales from Campaign X ÷ leads from Campaign X
Cost per Completed Visit	Total marketing spend ÷ number of completed site visits
Customer Acquisition Cost	Total sales + marketing cost ÷ verified customers acquired

---

Section E — Security & Governance Requirements

The CRM will hold customer phone numbers, call recordings, financial records, and internal management assesSales Managerents. The following 17 security controls are mandatory — not optional — before the system handles any live customer data:

1. Secure login required for all user accounts without exception
2. Multi-factor authentication (MFA) mandatory for SALES MANAGER, GM, and CEO
3. Strong password policy with automatic session timeout and forced logout
4. Role-based access control: Executive / SALES MANAGER / GM / CEO / System Admin
5. Field-level permissions — manager assesSales Managerents and coaching scores hidden from executives
6. Encryption in transit (HTTPS/TLS) for all data tranSales Managerission
7. Encryption at rest for database, call recordings, and all stored files

8. Call recordings accessible only via secure, time-limited links — not direct cloud URLs
9. Recording download restricted to SALES MANAGER, GM, and CEO — each access event is logged
10. Full audit log: every data change with user ID, timestamp, and previous value
11. Automated daily backup with restoration formally tested at least once per month
12. Immediate account deactivation on employee resignation or termination
13. Data export restricted to System Admin — no bulk self-service export by executives
14. Data retention and deletion policy formally documented before go-live
15. Customer consent records maintained where legally required
16. Incident response procedure documented, assigned, and tested
17. System Admin role kept separate from CEO; developer has no permanent production access

---

Section F — 12 Conditions for Full Development Approval

Full development approval is granted subject to all 12 conditions below being formally documented, reviewed, and signed off. Each must be addressed and confirmed before the construction phase commences:

1. Corrected lead lifecycle and data model: Contact → Inquiry → Opportunity — approved in writing
2. Existing lead bank import, deduplication, and reactivation workflow fully documented
3. Campaign, Ad Set, Advertisement, and UTM attribution fields specified per inquiry
4. Mandatory next-action engine and SLA escalation logic formally defined
5. Call logging method confirmed: structured post-call form required after every attempt
6. Full appointment lifecycle designed: Scheduled → Confirmed → Completed / No-Show
7. Booking, payment receipt, and commercial verification required before Sold status is available
8. Revised KPI framework adopted — conversion and revenue focused, not activity-volume only
9. Security, privacy, backup, and access control specification reviewed by management
10. Developer acceptance criteria documented for each of the 12 modules
11. User Acceptance Testing (UAT) plan with test scripts prepared and signed off
12. Pilot implementation plan and phased rollout roadmap submitted for CEO review

CEO Decision

This revised architecture addresses all 23 critical findings from the formal review. The system is designed to materially reduce lead leakage by automating capture, assignment, follow-up accountability, and management escalation. Full development approval is recommended subject to the 12 conditions above.
